

YOUR PARTNER IN POWER

COMPANY PROFILE

WHO WE ARE

Having extensive experience in the operations and maintenance of solar energy generation assets in the Middle East as well as South Africa, we have seen firsthand the many shortcomings within the Solar PV industry, from poor initial system specification through to non-compliance with national standards and overall industry best practices.

It was for this reason that we created WATTFOX SYSTEMS. A proudly South African company specialising in turnkey construction of photovoltaic (PV) solar plants on a commercial and large-scale level. We help businesses to take control of their energy costs and energy security with our offering of tailored solar PV systems, battery energy storage and electrical infrastructure solutions.

We design with **precision**, build for **reliability** and deliver **measurable results**.

Our specialisation covers the entire value chain. This includes initial feasibility, project development, procurement and construction through to final operations and maintenance of the systems. This allows us to ensure that the standards that we set for ourselves can be upheld with every project, with client relationships always held at the forefront.

Our expertise focuses on the technical and economic optimisation of the solar plant to ensure that your business always gets the best return on investment. You can rest easy knowing that our systems are specified, designed and constructed to perform their best and to not just meet, but to exceed their performance expectations for their entire lifespan.

OUR SERVICE OFFERING

GRID-TIED SOLAR PV SYSTEMS

Custom-designed solar PV solutions that reduce grid reliance and energy bills.

BATTERY ENERGY STORAGE SYSTEMS

Seamless backup power for loadshedding and grid outages — built to keep your business running.

LOW-VOLTAGE ELECTRICAL CONTRACTING

Turnkey electrical services: Distribution boards, building wiring and electrical infrastructure upgrades compliant to SANS.

ENERGY AUDITS AND CONSULTING

Detailed energy usage analysis and modelling of energy usage patterns to ensure correct system sizing.

WHY CHOOSE US

TRANSPARENT PARTNERSHIP

We believe in honesty over hype. With us, you'll get clear, accurate advice on what our systems can deliver — no exaggerated promises, no hard sells.

If a solution isn't right for you, we'll tell you.

EXPERTISE THAT DELIVERS

Backed by extensive experience across South Africa and the Middle East, we bring deep technical knowledge to every project.

We founded our company to raise the bar in a market flooded with unhappy system owners – and we're here to set the standard.

ENGINEERING EXCELLENCE

From cutting-edge design tools to advanced on-site assessments, we have the skills and technology to get it right the first time.

Our detailed simulations and precise measurements ensure your system performs – reliably, efficiently and profitably.
